1. **Abstract:** Weather Surveillance Radar - 1988 Doppler (WSR-88D), or NEXt Generation RADar (NEXRAD), Level III data are radar products generated from the Level II base data. The products are used to assist forecasters and others in weather analysis, predictions and warnings. The Level III products were recorded on WORM Optical Disks at National Weather Service (NWS) sites since the early 1990s. Currently the required products are provided in near real-time from a NWS Central Collection Facility (CCF). When products were written to the WORM Optical Disks, all products were saved and have been archived. Only required products are collected at the CCF and then archived by NCDC. Irregardless of how the Level III products have been received, the NCDC archives the products in compressed tape archive format (tar) on the NCDC Hierarchical Data Storage System (HDSS). The Level III Products archive is made available via the World Wide Web on the NCDC Home Page.

The standard products available are listed below and the format type is indicated. Details of the specific formats are provided following this list and are copied from the NWS Interface Control Document for RPG/Associated PUP #2620001.

## 2. Element Names and Definitions:

RPG Header	AWIPS Header	WMO Header	Product
2/GSM	GSM	NXUS6i cccc GSM xxx	General Status Message
19/R	NOR	SDUS5i cccc NOR xxx	Base Reflectivity - 124 nmi Range 0.50 Degree Elevation Angle
20/R	NOZ	SDUS7i cccc NOW xxx	Base Reflectivity - 248 nmi Range 0.50 Degree Elevation Angle
25/V	NOW	SDUS6i cccc NOW xxx	Base Radial Velocity - 32 nmi Range 0.50 Degree Elevation Angle
27/V	NOV	SDUS5i cccc NOV xxx	Base Radial Velocity - 124 nmi Range 0.50 Degree Elevation Angle
28/SW	NSP	SDUS6i cccc NSP xxx	Base Spectrum Width - 32 nmi Range 0.50 Degree Elevation Angle
30/SW	NSW	SDUS6i cccc NSW xxx	Base Spectrum Width - 124 nmi Range 0.50 Degree

Table IIa. Product Dependent Halfword Definitions for Product Request Message

Product Name	Msg Code (s)		Content	Units (INT*2)	Range	Accuracy/ Precision
Base Products	16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30	22	Elevation Angle	Degrees	-1.0 to 45.0	.1, Note 1
Echo Top Contour	42	25	Contour Interval	Feet	2000 to 30,000	1000
Severe Weather Analysis	43, 44, 45, 46	20	Azimuth of Window	Degree	0 to 359.9	.1, Note 1
		21		Nmi	0 to 124.0	.1, Note 1
		22	Center Range of Window	Degree	-1.0 to 45.0	.1, Note 1
			Center Elevation Angle			
Cross Section	50, 51, 52, 85, 86	20	Azimuth of Point 1	Degree	0 to 359.9	.1, Note 1
		21		Nmi	0 to 124.0	.1, Note 1
		22	Range of Point 1	Degree	Same as Point 1	.1, Note 1
		23	Azimuth of Point 2	Nmi	Same as Point 1	.1, Note 1
Weak Echo Region	53	20	Azimuth of Window	Degree	0 to 359.9	.1, Note 1
		21		Nmi	0 to 124.0	.1, Note 1
		23, 24	Center Range of Window	N/A	0,1/bit	N/A, Note 4
			Center Bit Map			
Storm Relative Mean Radial Velocity Region	55	20	Azimuth of Window	Degree	0 to 359.9	.1, Note 1
		21		Nmi	0 to 124.0	.1, Note 1
		22	Center Range of Window	Degree	-1.0 to 45.0	.1, Note 1
		23		Knots	0 to 99.9	.1, Note 1,2
		24	Center Elevation Angle	Degrees	0 to 359.9	.1, Note 1
Storm Relative Mean Radial Velocity Map	56	22	Storm Speed			
		23	Storm Direction			
		24	Elevation Angle	Degree	-1.0 to 45.0	.1, Note 1
			Storm Speed	Knots	0 to 99.9	.1, Note 1,3
			Storm Direction	Degrees	0 to 359.9	.1, Note 1

:
:
:

VAD	84	22	Altitude	K Feet	0 to 70	1
Combined Moment	49	20	Azimuth of Window	Degree	0 to 359.9	.1, Note 1
		21		Nmi	0 to 124.0	.1, Note 1
		22	Center Range of Window	Degree	-1.0 to 45.0	.1, Note 1
			Center Elevation Angle			
User Selectable Precipitation (Note 5)	31	20 21	End Hour Time Span	Hours Hours	-1.0 to 23, 1 to 24	1, Note 6 1
Clutter Filter Control (Note 5)	34	20	Bit Map	N/A	0,1 bit	N/A, Note 7

Note 1. Scaled Integer.

Note 2. A value of -1. indicates that the storm motion is that of the storm closest to the window center.

Note 3. A value of -1 indicates that the storm motion is that of the vector average of all currently identified storms.

Note 4. Defines up to eight user selected elevation angles available in the current scan strategy. Scan strategy may contain 20 cuts. Each elevation cut selection is represented by a unique bit setting. Bit 1 of halfword 23 corresponds to elevation cut #1. Bit 4 of halfword 24 corresponds to elevation cut #20. Bit 0 of halfword 23 is the MSB and is not used.

Note 5. One time requests for this product should use the "latest available" request option. That is, place -2 in the volume scan start time field (halfword 18-19).

Note 6. A value of -1 indicates that the end time will be the time of the most recent hourly update.

Note 7. Defines the clutter map segment number and channel type. Bit 15 defines the channel type. If bit 15 is 0, then the surveillance channel map is requested. If bit 15 is 1, then the Doppler channel map is requested. Bits 14 through 10 specify evaluation segment numbers 1 through 5, respectively. Set the bit number of the segment being requested. Segment 1 is the lowest clutter filter map, segment 2 is the upper clutter filter map. Segments 3 through 5 are for future expansion.

PRODUCT DESCRIPTION BLOCK

	HALFWORD	TYPE	UNITS	RANGE	PRECISION / ACCURACY	REMARKS
10	Block Divider	INT*2	N/A	-1	N/A	Integer value of - 1 used to delineate the header from the Product Description Block
11 - 12	Latitude of Radar	INT*4	Degrees	-90 to +90	0.001	North (+) or South (-) of the Equator
13 - 14	Longitude of Radar	INT*4	Degrees	-180 to +180	0.001	East (+) or West (-) of the Prime Meridian
15	Height of Radar	INT*4	Feet	-100 to +11000	1	Feet above mean sea level
16	Product Code	INT*2	N/A	16 to 131, -16 to - 131	N/A	Internal NEXRAD product code of weather product being transmitted (Refer to Table III)
17	Operational Mode	INT*2	N/A	0 to 2	N/A	0 = Maintenance 1 = Clean Air 2 = Precipitation/Seve re
18	Volume Coverage Pattern	INT*2	N/A	1 to 767	1	Weather RDA volume coverage pattern for the scan strategy being used
19	Sequence Number	INT*2	N/A	-13, 0 to 32767	1	Sequence number of the request that generated the product (Refer to Figure 3-3). For products generated by an Alert Condition, sequence number = -13
20	Volume Scan Number	INT*2	N/A	1 to 80	1	Counter, recycles to one (1) every 80 volume scans
21	Volume Scan Date	INT*2	Julian Date	1 to 32767	1	Modified Julian Date; integer number of days since 1 Jan 1970
22 - 23	Volume Scan Start Time	INT*4	Seconds GMT	0 to 86399	1	Number of seconds after midnight, Greenwich Mean Time (GMT)
24	Generation Date of Product	INT*2	Julian Date	1 to 32767	1	Modified Julian Date as above

:  
:

25 - 26	Generation Time of Product	INT*4	Seconds GMT	0 to 86399	1	Number of seconds after midnight, Greenwich Mean Time (GMT)
27 - 28	-----PRODUCT DEPENDENT AS					
29	Elevation Number	INT*2	N/A	1 to 20	1	Elevation number within volume scan
30 - 53	-----PRODUCT DEPENDENT AS					
	PER TABLE V-----					

Figure 3-5. Graphic Product Message (Sheet 8 of 13)

HALFWORD	FIELDNAME					
NOTE: HALFWORD 54 IS DATA DEPENDENT AS FOLLOWS:						
54	Number of Maps	INT*2	N/A	0 to 17	1	If the message is map data, this halfword is the number of Map Pieces
54	Version	INT*1	N/A	OR 0 to 255	1	If the message is product data, the upper byte is the version number of the product. The original format of a product will be version 0.
54	Spot Blank	INT*1	N/A	0 to 1	1	If the message is product date, the lower byte is: 1 = Spot Blank ON 2 = Spot Blanking if OFF
55 - 56	Offset to Symbology	INT*4	Halfwords	0 to 80000	1	Number of halfwords from the top of message (message code field in header) to the -1 divider of each block listed. If the offset is zero (0), the block is not part of the product in question
57 - 58	Offset to Graphic	INT*4	Halfwords	0 to 80000	1	Same as above to Graphic Block (NOTE: For Product 62, this will point to the Cell Trend data)
59 - 60	Offset to Tabular	INT*4	Halfwords	0 to 80000	1	Same as above to Tabular Block

Figure 3-5. Graphic Product Message (Sheet 9 of 13)

:  
:

Note 1. The Data Level threshold values used to define the color table of products, described in Table III, consist of up to 16 Data Levels. The exception to this is products 32, 33 and 81, which may have up to a maximum of 255 equally spaced data levels.

For product 32, data level codes 0 and 1 correspond to "Below Threshold" and "Missing", respectively. Data level codes 2 through 255 denotes data values starting from the minimum data value in even data increments. The threshold level fields are used to describe the 256 levels for product 32 as follows:

- halfword 31 contains the minimum data value in dBZ \* 10
- halfword 32 contains the increment \* 10 in dBZ( s).
- halfword 33 contains the number of levels (0 - 255)

For product 33, data level code 0 will corresponds to no accumulation and data level code 255 will indicate "Missing". Data level codes 1 through 250 denotes no data values starting from the minimum data value in even data increments. The threshold level fields are used to describe the 256 levels for product 33 as follows:

- halfword 31 contains the minimum data value in inch\*100
- halfword 32 contains the increment\*100 inches
- halfword 33 contains the number of levels (0 - 255)

For product 81, data level codes 0 will correspond to no accumulation and data level code 255 will represent data outside the coverage area. Data level codes 1 through 254 denotes data values starting from the minimum data value in even data increments. The threshold level fields are used to describe the 256 levels for product 81 as follows:

- halfword 31 contains the minimum data value in dBA\*10
- halfword 32 contains the increment \*1000 in dBA(s).
- halfword 33 contains the number of levels (0 - 255)

Except for Products 32, 33 and 81, the Data Level Threshold halfwords are coded as follows:

If bit 0 (most significant bit) is set to one (1), then the least significant byte (bits 8-15) is interpreted as a code for:

- 0 = "BLANK"
- 1 = TH
- 2 = ND
- 3 = RF

If bits 2, 3, 4, 5, 6 or 7 of the most significant byte are set to 1, then they are interpreted as a code for:

Bit 2 - If set the data field in the least significant byte is scaled by 20, to allow two decimal places of accuracy in some of the Threshold tables.

Bit 3 - If set the data field in the least significant byte is scaled by 10, to allow for one decimal place of accuracy in some of the threshold tables.

:  
:

Bit 4 = ">"  
 Bit 5 = "<"  
 Bit 6 = "+"  
 Bit 7 = "-"

If bit 0 (most significant bit) is zero (0), then the low order byte (bits 8 - 15) is a numeric value.

Example: A data level value of (Hex) 8401, (bit sequence 1000  
 0100 0000 0001) is interpreted as: < TH

Figure 3-5. Graphic Product Message (Sheet (page) 10 of 13)

<u>PRODUCT SYMBOLOGY BLOCK</u>					
FIELDNAME	TYPE	UNITS	RANGE	PRECISION/ ACCURACY	REMARKS
Block Divider	INT*2	N/A	-1	N/A	Integer value of -1 used to delineate the Product Description from the Product Symbology Block
Block ID	INT*2	N/A	1	N/A	Constant value of 1 which identifies this block
Length of Block	INT*4	N/A	1 to 80000	1	Length of block in bytes (includes preceding divider and block id)
Number of Layers	INT*2	N/A	1 to 15	1	Number of data layers contained in this block (see Note 2)
Layer Divider	INT*2	N/A	-1	N/A	Integer value of -1 used to delineate one data layer from another
Length of Data Layer	INT*4	N/A	1 to 80000	1	Length of data layer (in bytes) not including layer divider and length field
Display Data Packets	N/A	N/A	N/A	N/A	See Figures 3-6 through 3-14

Note 2. The various layers are different types of data formats. An example would be the combined moment product. One layer is reflectivity data in radial packets, another layer is the vector arrow packets that define the velocity and spectrum width. The length of the layer does not include the divider or the length word.

Figure 3-5. Graphic Product Message (Sheet 11 of 13)

# GRAPHIC ALPHANUMERIC BLOCK

FIELDNAME	TYPE	UNITS	RANGE	PRECISION/ ACCURACY	REMARKS
Block Divider	INT*2	N/A	-1	N/A	Integer value of -1 used to delineate the Graphic Alphanumeric Block
Block ID	INT*2	N/A	2	N/A	Constant value of 2 which identifies this block
Length of Block	INT*4	N/A	1 to 65535	1	Length of block in bytes (includes preceding divider and block id) from the divider to the end of message
Number of Pages	INT*2	N/A	1 to 48	1	Total number of pages
Page Number	INT*2	N/A	1 to 48	1	Current page number
Length of Page	INT*2	N/A	4 to 1360	1	Number of bytes in Text Packet 1 through Text Packet N
Text Packet (N)	N/A	N/A	N/A	N/A	The format of these text packets are Packet Code 8, shown in Figure 3-8, and Packet Code 10, shown in Figure 3-7

Figure 3-5. Graphic Product Message (Sheet 12 of 13)

TABULAR ALPHANUMERIC BLOCK (see note 3)

FIELDNAME	TYPE	UNITS	RANGE	PRECISION/ ACCURACY	REMARKS
Block Divider	INT*2	N/A	-1	N/A	Integer value of -1 used to delineate the Tabular Alphanumeric Block
Block ID	INT*2	N/A	3	N/A	Constant value of 3 which identifies this block
Length of Block	INT*4	N/A	1 to 65535	1	Length of block in bytes from the divider to the end of message
-----SECOND MESSAGE					
HEADER BLOCK-----					
-----SECOND PRODUCT					
DESCRIPTION BLOCK-----					
Block Divider	INT*2	N/A	-1	N/A	Integer value of -1 used to delineate the data from the Product Description Block
Number of Pages	INT*2	N/A	1 to 48	1	Total number of pages
Number of Characters	INT*2	N/A	0 to 1360	1	Number of characters in page
Character Data	CHAR	8 Bit ASCII	ASCII Character Set	N/A	Characters are ASCII when the MSB is set to zero. When the MSB is set to one, the remaining 7 bits define the special symbol
End of Page Flag	INT*2	N/A	-1	N/A	Integer value of -1 to delineate the end of page

NOTE 3. Tabular Alphanumeric Block must be the last block in a product message. Maximum lines per page = 17. Alphanumeric Products containing RPG Site Adaptable Parameters must have the Site Adaptable Parameters formatted as the last page(s) of the Product.

Figure 3-5. Graphic Product Message (Sheet 13 of 13)

Table V. Product Dependent Halfword Definition for Product Description Block

Product Name	Msg Code	Hword#	Content	Units	Range	Accur/Prec

Table V. Product Dependent Halfword Definition for Product Description Block

Note 1. Scaled Integer, precision column defines scaling.

Note 2. Real\*4 represents one fullword (32 bits) of real data, where the MSB is the sign bit, followed by a 7 bit exponent and a 24 bit mantissa.

Note 3. Corresponds to MSB of bit map as defined in Table II-A.

Note 4. Corresponds to LSB of bit map as defined in Table II-A.

Note 5.	Msg Code	Halfword	Description
		Echo Tops Product	41 47 Value of zero altitude indicates "No"
		Echo Tops Contour	42 47 Echos Detected"
PUP Text Message	77	49	User designation is set by the RPGOP only, where: 0 = Send message to all dedicated users; >0 = Send message to the user on specific line identified.
		Layer Products	63-72 48 Value of zero layer bottom indicates "Surface"
	89-90	48	
VAD Wind Profile	48	49	Altitude value of -9999 indicates ("Wind Barbs") non-valid altitude, speed and direction which are displayed as blanks
Velocity Azimuth	84	47	Wind speed value of -9999 Display indicates non-valid speed and direction. Speed and direction are displayed as blanks
50			Slant range value of -9999 indicates non-valid slant range and elevation angle. Values of slant range and elevation angle are displayed as blanks
51			RMS value of -9999 indicates non-valid RMS. Value of RMS is displayed as blanks.

Note 6. Value enclosed in parentheses of range column is a code to indicate data is unavailable.

Note 7. Applicable only to products generated as a result of an Alert.

Note 8. Defines the clutter map channel type and segment number. Bit 15 (LSB) defines the channel type. If bit 15 is 0, then it is a clutter filter control product for the surveillance channel. If bit 15 is 1, then it is the Doppler channel clutter filter control product. Bits 14 through 10 specify elevation segment numbers 1 through 5, respectively. Segment 1 is the lowest elevation clutter filter map, segment 2 is the upper elevation clutter filter map. Segments 3 through 5 are for future expansion.

Note 9. If flag is set, the product is null i.e., rainfall data to build product was unavailable.

## A. Glossary

<u>Acronym/Abbreviation</u>	<u>Description</u>
A	Address Sequence
ABM	Asynchronous Balanced Mode
ACCUM	Accumulation
ADAPT	Adaptation
ADM	Asynchronous Disconnect Mode
ALT	Altitude
ANSI	American National Standards Institute
ARO	Asynchronous Respond Opportunity
ASCII	American Standard Code for Information Interchange
AZ	Azimuth
BA	Balanced, Asynchronous Balanced Mode (Same as ABM)
Beg	Beginning
Bit	Binary Digit
Block	A related set of bytes containing control information or data. A block is a component of a message.
bps	Bits per second
C	Control Sequence
Cal	Calibration
CALIB	Calibration
CCITT	Consultative Committee International Telephone and Telegraph
Char	Character
CKT	Circuit
CLIN	Contract Line Item Number
CM	Cubic Meters
Comp	Composite
Const	Constant
CPC	Calcomp Pen Command

:  
:

CPCI	Computer Program Configuration Item
CPU	Central Processor Unit
CRC	Cyclical Redundancy Checking
dBZ	Reflectivity, in decibels
DCE	Data Circuit-Terminating Equipment
deg	Degree
Dig	Digital
Dir	Direction
DISC	Disconnect
DM	Disconnected Mode
DTE	Data Terminal Equipment
EIA	Electronic Industries Association
Err	Error
Ext	External
F or Flag	Flag Sequence
FCS	Frame Check Sequence
Flg	Flag
Frame	A segment of a bit stream bounded by a uniquely recognizable bit sequence and containing a specified number of bits or bytes of data.
FRMR	Frame Reject
GFS	General Format Specifier
GMT	Greenwich Mean Time
Halfword	Two bytes (16 bits)
Header	A set of bits or bytes contained in a bounded segment of information which provides a label or control information to the remaining contents of the segment.
Hgt	Height
Hword	Halfword (16 bits)
I	Information
I-field	Information field

:  
:

I-frame	Information frame
ICD	Interface Control Document
ID	Identification
IEB	Industrial Electronics Bulletin
INT*2	One halfword of integer data in standard 2's compliment format
INT*4	One fullword (32 bits) of integer data in standard 2's compliment format
Int	Integer
Integ	Integrated
Integer	Bit stream of 1s and 0s, represented as an integer number, not formatted in 2's compliment format (i.e., 32,768 integer code would represent setting the MSB of a halfword).
ISO	International Organization for Standardization
ITS	Information Transfer State
kg	Kilogram
km	Kilometer
kfs	Kilofeet
kts	Knots
LAPB	Link Access Procedure, Balanced
LCG	Logical Channel Group
LDS	Logically Disconnected State
LFM	Limited Fine Mesh
Liq	Liquid
LSB	Least Significant Bit
LSW	Least Significant Word
MAX	Maximum
Message	The complete set of information transported from the source to the destination. A message may be a product, product request, data, data request, or NEXRAD control information.

MSB	Most Significant Bit
Msg	Message
MSL	Mean Sea Level
MSW	Most Significant Word
N(r)	Receive sequence variable
N(s)	Send sequence variable
NMI	Nautical Mile
N/A	Not Applicable
NAVAIDS	Navigational Aids
Neg	Negative
NEXRAD	Next Generation Weather Radar
Num	Number
NTR	NEXRAD Technical Requirements
OP	Operation
OS	Operating System
OSI	Open Systems Interconnection
PDB	Product Description Block
Pos	Positive
Prec	Precipitation
Prob	Probability
Product	A collection of information that is self contained and provides a complete representation of a graphical image or an alphanumeric message.
PUP	Principal User Processor Group
PVC	Permanent Virtual Circuit
RAD	Radial
RCM	Radar Coded Message
RDA	Radar Data Acquisition Group
Real*4	One fullword (32 bits) of real data, where the MSB is the Sign-bit, followed by a 7 bit Exponent and a 24 bit Mantissa
Reflect	Reflectivity

:  
:

Reflect.Calib.Corr.	Reflectivity Calibration Correction
REJ	Reject
RES	Resolution
RFC	River Forecast Center
RGDAC	Rain Gage Data Acquisition Computer
RLE	Run Length Encoded
RMS	Root Mean Square
RNR	Receiver Not Ready
RPG	Radar Product Generation Group
RPGOP	Radar Product Generator Operational Position
RR	Receiver Ready
SABM	Set Asynchronous Balanced Mode
Scaled Integer	Integer values with an assumed decimal point whose position is defined by the precision of the item
SCN	Specification Change Notice
Sec	Second
sq	Square
Spd	Speed
SPR	Software Problem Report
SR	Signaling Rate Selector
SW	Spectrum Width
SWP	Severe Weather Probability
TAB	Tabular
TM	Test Mode
Turb	Turbulence
TWA	Two-Way Alternate Transmission
TWS	Two-Way Simultaneous Transmission
UA	Unnumbered Acknowledgement
UCP	Unit Control Position
UI	Unnumbered Frame

VAD	Velocity Azimuth Display
Var	Variation
Vel	Velocity
VIL	Vertically Integrated Liquid
VME	Versa Module Eurocard
VMECS	Versa Module Eurocard Communication Subsystem
Wd	Width
ZBID	Zero-Bit Insertion and Deletion

## Appendix B. Radar Coded Message

### Header

The header is encoded as follows:

ccc	The communications node (PUP site identifier).
ROBEE	The product category for edited radar coded message.
ROBUU	The product category for unedited radar coded message.
sidd (C/R)	Four-letter RDA site identifier. (Example: cccROBEE sidd (C/R))

Part A of the message is encoded as follows:

/NEXRAA	Part A indicator.
sidd	Four letter RDA site identifier.
ddmmyytttt	The day (dd) of the month (mm), the year (yy) and the time (tttt) to the nearest minute in Greenwich Mean Time (GMT).
edited or unedited	Status of message.
RADNE	A group to encode no reportable reflectivity intensity values shall be provided; i.e., field NInnnn is zero. This shall be corrected after graphic editing.
RADOM	A group to encode radar down for maintenance shall be provided.
/Mdnnnn	A group of six characters to encode operational mode shall be provided. Choices are PCPN and CLAR. (Example: /MDPCPN)
/SCnnnn	A group of six characters to encode scan strategy shall be provided. Refer to Appendix I of NTR. Choices are 1405 (14 scans in 5 minutes), 0906, 0510, etc. (Example: /SC1405)
/NInnnn	The total number (nnnn) of intensities (NI) reported in the following field (gggi) shall be encoded. This group shall be corrected after editing, if editing is performed (Example: /NI0144)
gggi	Reflectivity intensity shall be mapped onto the 1/16 LFM grid (ggg). Encode locations and intensities by a series of groups made up of three letters (1/16 LFM) followed by the maximum intensity of the designated grid box. The three letters (in order) shall be row, column, and sub-grid. The

:  
:  
:

numbers following represent intensities in succeeding sub-grid boxes in that row; that is, encode each 1/16 LFM grid box from west to east, starting with the northern-most row with data, followed by the next southern row, etc. In the interest of compacting the message, successive intensities of different or similar values may be listed after a single location as long as the intensities are continuous. When succeeding grid boxes contain the same intensity value, the number of succeeding boxes with the same value may be designated by a letter of the alphabet; that is, if four succeeding 1/16 LFM grid boxes (a total of five boxes) are at level 2, they could be coded as GGG2D. The "2D" may also be followed by different intensity values. Location/intensity groups shall be separated by a comma. (Example: ABF112D331, BCA1211)

/MThhh:ggg            The location and height (MSL) of the maximum echo top (MT) within 230 km radius of the radar shall be encoded using the three-letter grid designator (ggg) and assigning the height coinciding with echo top product in hundreds of feet (hhh). (Example: /MT320:NLB)

/NCENnn:            The total number (nn) of centroids (NCEN) reported in this portion of the message shall be encoded. This number shall correspond to the corrected centroids below. (Example: /NCEN04:)

Cnnggg dddfff    The centroid @ number (nn), location (grid box) (ggg), direction from which it is moving (in 1-degree increments) (ddd), and its speed (fff) in knots, shall be encoded. Successive groups shall be separated by commas. If, during editing, data are deleted in a grid box that contains a centroid, this group shall be corrected by deleting this centroid. (Example: C03QMB240012)

/ENDAA(C/R)        A group to indicate the end of Part A.

The following is a summary example of the components of Part A:

```
/NEXRAA  sidd 2812881330 EDITED (C/R)

/MDnnnn  /SCnnnn  /NInnnn:

gggiii. . .i,gggiii...1

/MThhh:ggg

/NCENnn:  Cnnggg dddfff, Cnnggg dddfff

/ENDAA (C/R)
```

Part B: VAD Winds

:  
:  
:

Part B of the RCM contains a single profile of the horizontal wind information derived from the output of the VAD algorithm. Part B of the message is encoded as follows:

/NEXRBB	Part B indicator.
sidd	Four letter RDA site identifier.
	ddmmyytttt The day (dd) of the month (mm), the year (yy), and the time (tttt), to the nearest minute, in GMT.
VADNA	The optional entry VADNA shall be encoded for instances when no VAD wind data available for the last 15 minutes, if appropriate.
	hhhcdddf
	Coded heights (hhh) in hundreds of feet MSL; confidence @ level, using RMS for the coded height; wind direction (ddd) and wind speed (fff), in knots, shall coincide with those derived from the VAD Winds product. The confidence level shall be encoded as a single letter in accordance with the following:
	A = RMS of 2 kts;                      B = RMS of 4 kts; C = RMS of 6 kts;                      D = RMS of 8 kts; E = RMS of 10 kts;                      F = RMS of 12 kts; G = RMS of greater than or equal to 14 kts.

Wind direction and speed, as output from the VAD Algorithm, shall be reported at up to 19 heights, in feet MSL. Default heights are:

1,000	6,000	12,000	25,000
2,000	7,000	14,000	30,000
3,000	8,000	16,000	35,000
4,000	9,000	18,000	50,000
5,000	10,000	20,000	

(Example: 080C240060)

/ENDBB (C/R) End of Part B indicator.

The following is a summary example of the components of Part B:

```
/NEXRBB sidd 2812881330 (C/R)
hhhcdddf ,hhhcdddf ,hhhcdddf
/ENDBB (C/R)
```

#### Part C: Remarks

Part C of the Radar Coded Message contains remarks in an alphanumeric format. Automatically generated remarks provide information on the locations of tornadic vortex signatures, mesocyclones, centroids, storm tops and hail

:

indices. The automated portion of Part C is encoded as follows:

/NEXRCC	Part C indicator.
sidd	Four letter RDA site identifier.
ddmmyytttt	The day (dd) of the month (mm), the year (yy) and the time (tttt) to the nearest minute in GMT.
/NTVSnn:	The total number (nn) of Tornado Vortex Signatures (NTVS) detected by the TVS algorithm and reported in Part C shall be encoded (Example: /NTVS03:).
TVSnnggg	The location (ggg) and number identifier (nn) of each Tornado Vortex Signature (TVS) shall be encoded using the three-letter grid box designator (Example: TVS02NLB).
/NMESnn:	The total number (nn) of mesocyclones and areas of uncorrelated shear (NMES) detected by the Mesocyclone Detection algorithm and reported in Part C shall be encoded (Example: /NMES05:).
Mnnggg:	The location (ggg) and number identifier (nn) of each mesocyclone or area of uncorrelated shear (M) shall be encoded using the three-letter grid box designator (Example: M03JLC).
/NCENnn:	The total number (nn) of centroids (NCEN) reported in Part C shall be encoded (Example: /NCEN08:).
Cnnggg ShhhHi	<p>The height (hhh) in hundreds of feet (MSL), of the storm top (S), as derived from the Storm Structure algorithm, for each centroid @ identified in Part A to include location (ggg) shall be encoded. The centroid identifier number (nn) is the same as given in Part A.</p> <p>The hail (H) index (I), as provided by the Hail algorithm, is also given as one of the four following data levels:</p> <p>N - no hail; P - possible or probable hail; H - hail; U - unknown</p> <p>(Example: C04QQD S440HP).</p>

In addition to the automatically generated remarks, Part C provides for optional manual entries. A template is provided containing the fixed part of the groups listed below. The only groups to be sent are those to which data are added. It should be noted that the absence of a remark does not imply that the phenomenon does not exist.

/PCTRyyyy,aaa:gg	Precipitation type and intensity trend. Precipitation type (yyyy) may be coded for a representative area of the display. The type is variable and up to four characters in length. The intensity trend (aaa) is also variable in length and up to three characters in length. The location (gg) is reported using the two
:	
:	100:

letter identifier for the 1/4 LFM grid.

For convective echo systems, the characteristic type of precipitation as defined as that type associated with the maximum observed intensity. For non-convective echo systems, the type of precipitation is defined as that type predominant in horizontal extent. If precipitation is reaching the surface, report that type. Precipitation types are:

<u>Precipitation</u>	<u>Symbol</u>
Rain	R
Rain Shower	RW
Freezing Rain	ZR
Freezing Rain Shower	ZRW
Snow	S
Snow Shower	SW
Drizzle	L
Freezing Drizzle	ZL
Ice Pellet	IP
Ice Pellet Shower	IPW

Designate areas believed to be associated with thunderstorms with the symbol T preceding the precipitation symbol.

Evaluate the intensity trend in terms of the net Change in the characteristic intensity during a period of 1 hour for lines and areas and 15 minutes for cells.

Report the intensity trend as increasing (+) or decreasing (-), if during the period, the net change in characteristic intensity (dBZe) changes from one intensity level to another.

If the net change in the characteristic intensity during the period does not change categories, report the intensity trend as NC (no change).

Report echo systems as NEW (new development) if they originated during the period specified above. Areas or lines that develop from a cell or cells during the hour preceding the report shall be reported as NEW.

For a mixed system, consisting of a liquid characteristic type of precipitation and a frozen secondary type, report the intensity trend of the liquid precipitation.

Intensity trend symbols are:	<u>Symbol</u>	<u>Trend</u>
	+	Increasing
	-	Decreasing
	NC	No Change
	NEW	New

(Example: PCTRRW,NEW:LO,LP)

/LEWP:gg      A line echo wave pattern (LEWP) shall be encoded using the two letter 1/4 LFM grid box location (gg) (Example: /LEWP:KJ,LK,MK,NK,OK,PL).

/BASEhhh:gg      The base of an elevated layer (BASE) shall be encoded in hundreds of feet (hhh) (MSL) using the two letter

:  
:  
:

identifier for the 1/4 LFM grid location (gg) (Example:  
/BASE090:LO,MO).

/MALFhhh:gg           The occurrence of precipitation which is mostly aloft (MALF) shall be encoded. The height (hhh) is reported in hundreds of feet (MSL) and the location (gg) is the 1/4 LFM grid identifier (Example: /MALF050:KP,KQ).

/PALFhhh:gg           The occurrence of precipitation which is partially aloft (PALF) shall be encoded. The height (hhh) is reported in hundreds of feet (MSL) and the location (gg) is the 1/4 LFM grid identifier (Example: /PALF050:PM,PN).

/MLTLVLhhh           The height (hhh) of the melting level (MLTLVL) in hundreds of feet (MSL) shall be encoded (Example: /MLTLVL075).

/EYEdddfffc:ggg;       The location (ggg) of the eye of a hurricane or tropical storm (EYE), the (LATeee.ex, direction (ddd) from which it is moving and the speed (fff), in knots, LONeee.ey of movement shall be encoded. Confidence in the fix (cc) is reported as good (GF), fair (FF), or poor (PF). Further, the location of the eye shall also be encoded in latitude (LAT) and longitude (LON). The location shall be expressed in whole degrees and tenths (eee.e) with provision for specifying north (N), south (S), east (E), or west (W) as appropriate. (Example: /EYE160010GF:00A;LAT28.4N, LON178.5W).

/CNTRdddfc:ggg;       The location (ggg) of the center of a hurricane or tropical storm (CNTR), LATeee.ex the direction (ddd) from which it is moving and the speed (fff) of movement, LONeee.ey in knots, shall be encoded. Further, the location of the center shall also be encoded in latitude (LAT) and longitude (LON). The location shall be expressed in whole degrees and tenths (eee.e) with provision for specifying north (N), south (S), east (E), or west (W) as appropriate. (Example: /CNTR160005:00A;LAT28.4N;LON178.5W)

/REM:               This space is for any other remarks not covered in the above remarks.

/EDITED:int       If the radar coded message has been edited (EDITED) the editor shall report such, adding his/her initials (int) (Example: /EDITED:DSS).

/ENDCC (C/R)           End of Part C indicator

:  
:  
:

## Appendix B. Radar Coded Message (cont)

The following is a summary example of the components of Part C:

```
/NEXRCC sidd 2812881330 (C/R)
/NTVSnn: TVSnnggg,TVSnnggg,TVSnnggg
/NMESnn: Mnnggg,Mnnggg,Mnnggg
/NCENnn: Cnnggg ShhhHi,Cnnggg ShhhHi,Cnnggg ShhhHi
/PCTRyyyy,aaa:gg
/LEWP:gg,gg,gg,gg
/BASEhhh:gg,gg,gg
/MALFhhh:gg,gg
/PALFhhh;gg,gg
/MLTLVLhhh
/EYEdddfffc:ggg;LATeee.ex,LONeee.ey
/CNTRdddf:ggg;LATeee.ex,LONeee.ey
/REM:
/EDITED:int
/ENDCC (C/R)
```

At the end of the message, the following group is sent:

```
/ENDALL (C/R)      A group to indicate end of message shall be provided.
```

3. **Start Date:** 19928024 1231Z

4. **Stop Date:** Ongoing.

5. **Coverage:** North America

- a. Southernmost Latitude: 24 36 N
- b. Northernmost Latitude: 48 11 N
- c. Westernmost Longitude: 122 30 W
- d. Easternmost Longitude: 70 15 W

6. **How to Order Data:**

Ask NCDC's Climate Services about the cost of obtaining this data set.  
Phone: 828-271-4800  
FAX: 828-271-4876  
E-mail: [NCDC.Orders@noaa.gov](mailto:NCDC.Orders@noaa.gov)

:  
:

7. **Archiving Data Center:**

National Climatic Data Center  
Federal Building  
151 Patton Avenue  
Asheville, NC 28801-5001  
Phone: (828) 271-4800.

8. **Technical Contact:**

National Climatic Data Center  
Federal Building  
151 Patton Avenue  
Asheville, NC 28801-5001  
Phone: (828) 271-4800.

NWS/Operational Support Facility  
Applications/Operations Branch  
1200 Westheimer Dr.  
Norman, OK 73069  
Phone: (405) 366-6530

9. **Known Uncorrected Problems:** None.

10. **Quality Statement:** The WSR-88D is a very complex system. Program modifications and engineering changes are rather constant features during the phase-in and upgrade processes. Special care must be taken to ensure that illegal configurations do not contaminate any summaries or statistical studies.

NCDC will be glad to assist in solving problems encountered in reading the data, but technical questions about the data themselves must be addressed to the:

NWS/Operational Support Facility  
Applications/Operations Branch  
1200 Westheimer Dr.  
Norman, OK 73069  
Phone: (405) 366-6530  
FAX: (405) 366-6550

11. **Essential Companion Datasets:** None.

12. **References:** NWS Interface Control Document for RPG/Associated PUP #2620001. No additional information provided with original documentation, but definitive information about all aspects of the Doppler radar is contained in Federal Meteorological Handbook -11 (FMH-11), Volumes A through D. These may be ordered from the National Climatic Data Center.
